The training framework was created as a **pre-test/post-test** format to determine whether or not the participants have learned more about outcome-based education. **Total 143 Faculty members** from Faculty of Medicine (All departments), Faculty of Pharmacy, Faculty of Paramedical and Faculty of Nursing participated in the training.

Participants' average **pre-test score** was (13/20) whereas their average **post-test score** was (18/20), demonstrating an improvement in their understanding of Outcome-Based Education.

Following each training's post-test, faculty members were asked for feedback on the parameters of the training's relevance, duration, usefulness, and confidence in creating COs, BSOs, and their mapping using Google Forms. Some faculty members suggested for more training sessions in future but the majority of participants agreed with the aforementioned parameters, which again shows how confident the majority of the faculty members are in outcome-based education.

Thus, it can be said that the Outcome Based Education Training was successful in increasing faculty members' understanding of and confidence in implementing the Outcome Based education.
